Profile

Principal-level Full Stack Engineer and Tech Lead with 8+ years of experience designing, building and leading production software across web, backend, mobile, cloud and AI systems. Strong track record delivering enterprise platforms, consumer products, micro-frontend architectures, scalable APIs, mobile applications and AI-powered product experiences.

Experienced in leading small engineering teams, setting technical direction, mentoring developers, modernising legacy platforms, designing scalable architectures and taking products from concept to production. Commercial experience across fintech, energy, ecommerce, developer tooling, Web3, AI and mobile products, including work with Mastercard, Shell, Petcircle, TinyMCE, SITA and independent AI product ventures.

Core Strengths

Technical Leadership: system design, architecture, technical strategy, technical roadmaps, delivery planning, engineering standards, mentoring, code review, stakeholder management

Frontend Engineering: React, Next.js, Gatsby, Vue, Svelte, TypeScript, micro-frontends, design systems, accessibility, SEO, performance optimisation

Backend Engineering: Node.js, .NET, TypeScript, REST APIs, GraphQL, PostgreSQL, MongoDB, Redis, Firebase, Python, serverless architecture, event-driven systems, API design, cloud-native backend services

Mobile Engineering: React Native, Expo, SwiftUI, Kotlin, StoreKit, RevenueCat, CloudKit

Cloud & DevOps: AWS, GCP, Lambda, S3, CloudFront, Route 53, CDK, CloudFormation, Terraform, SST, Docker, Nginx, CI/CD, Azure DevOps, Vercel, Render, Ansible, observability

AI Engineering: OpenAI, LangChain, OCR pipelines, image/video generation workflows, custom LoRA training, AI model training, ComfyUI, OpenCV, Tensorflow, Ostris

Product Engineering: SaaS products, consumer apps, billing systems, subscriptions, analytics, go-to-market execution

Experience

Founder / Principal Engineer

Beemur Apps, Melbourne

April 2025 – Present

Founded Beemur Apps, an independent product studio focused on AI-powered consumer and business applications. Responsible for product strategy, architecture, engineering, infrastructure, delivery and go-to-market execution across multiple products.

AI Image & Video Generation Platform

Designed and built a production-grade AI image and video generation application under Beemur Apps, focused on mobile-first creative generation workflows.

- Architected a full-stack AI generation platform covering mobile UI, backend orchestration, model workflows, generation queues, storage and user-facing product flows.
- Built image and video generation pipelines using ComfyUI and custom workflow graphs.
- Trained and integrated custom LoRA models for specialised visual styles and generation use cases.
- Designed production systems for long-running AI generation jobs, including request orchestration, queueing, retry handling, asset storage and result delivery.
- Built mobile-first user experiences inspired by modern AI-native creative apps, with emphasis on fast prompt-to-output workflows.
- Integrated authentication, usage tracking, credit/subscription logic and scalable backend services.
- Worked across model experimentation, infrastructure, UX, API design and production deployment.

Chompy AI - AI Nutrition Coach

Built and scaled an AI nutrition coaching product across mobile, backend and messaging platforms.

- Built the mobile application using React Native and Expo for iOS and Android.
- Designed backend services using Node.js, TypeScript, PostgreSQL, Redis and Firebase.
- Integrated OpenAI, LangChain and OCR pipelines for food logging, receipt scanning and AI-powered nutrition workflows.
- Built integrations across Messenger, WhatsApp and Telegram.
- Deployed cloud infrastructure using Docker, GCP, AWS Lambda and serverless functions.
- Scaled the product to 60,000+ active users.
- Achieved 4.9-star App Store and 4.8-star Play Store ratings.
- **Ranked #1** in “Top New Apps” on the US Google Play Store.

BillKit - Invoicing & Billing Software

Built a native iOS billing and invoicing product for small businesses and independent operators.

- Built the iOS application using SwiftUI and the latest Apple platform APIs.
- Designed offline-first persistence and sync using SwiftData and CloudKit.
- Built custom PDF generation workflows using PDFKit, A4 pagination, dynamic templates and a custom block-rendering PDF engine.
- Integrated StoreKit 2 and RevenueCat for subscriptions and lifetime purchases.
- Implemented LLM-powered invoice autofill, receipt scanning and item description generation.
- Built multi-language support across 20+ locales.
- Implemented accessibility support including VoiceOver, Voice Control, Dynamic Type and Dark Mode.

Senior Software Consultant

Mastercard Australia

September 2025 – December 2025

Contracted to support Mastercard's marketing technology platform, focusing on frontend modernisation, CMS integration and platform maintainability.

- Led updates and enhancements to Mastercard's Gatsby-based marketing website.
- Integrated Contentful as a headless CMS to improve content publishing workflows for non-technical teams.
- Designed a migration strategy from Gatsby to Next.js, focused on performance, scalability and long-term maintainability.

- Provided infrastructure guidance for Next.js adoption, including build pipelines, environment configuration and deployment strategy.
 - Collaborated with engineering, product and content teams to align technical decisions with business and brand requirements.
 - Ensured best practices across SEO, accessibility, performance, security and enterprise maintainability.
-

Lead Software Engineer

Labrys, Brisbane

August 2024 – April 2025

Led engineering for high-traffic Web3 and decentralised application platforms, working across architecture, frontend, backend, infrastructure and delivery.

- Architected and led development of Web3 platforms including Glue and Vana.
 - Designed scalable application infrastructure for high-volume decentralised products.
 - Built systems using Next.js, React, MongoDB, SQLite, Redis and Web3.js.
 - Integrated NeonDB, Turso, Vercel and Firebase to improve deployment velocity and scalability.
 - Implemented data pipelines and caching strategies to improve latency and responsiveness.
 - Collaborated with product, design and engineering teams to turn business requirements into technical delivery plans.
 - Contributed to DataHub, supporting user-owned data and decentralised AI ecosystem workflows.
-

Senior Software Engineer

Shell, Melbourne

April 2023 - August 2024

Worked as a senior engineer on energy product platforms, focusing on frontend architecture, micro-frontends, design systems and engineering standards.

- Led the design and development of a new micro-frontend architecture for energy solutions.
- Built a company-wide React component library using Styled Components and Storybook.
- Introduced frontend development patterns to improve consistency, reusability and delivery speed.
- Worked across AWS services including CDK, CloudFront, Route 53, S3 and Lambda.

- Supported CI/CD and delivery workflows through Azure DevOps.
 - Used Datadog for monitoring and observability.
 - Mentored junior developers and conducted code reviews to improve team quality and consistency.
-

Technical Lead

Petcircle, Sydney

July 2022 – January 2023

Led frontend engineering for Petcircle's auto-delivery squad, supporting ecommerce subscription and order management experiences.

- Led frontend technical direction for the auto-delivery product area.
 - Oversaw refresh of the order management experience.
 - Improved analytics and event collection workflows.
 - Introduced a headless CMS to improve content management and product flexibility.
 - Supported technical growth of team members through one-on-ones, mentoring and team development.
 - Worked with Preact, Next.js, JSP, AWS, New Relic, Dynatrace, Strapi, Jenkins and Spring Boot.
-

Full Stack Tech Lead

TinyMCE, Brisbane

September 2020 – July 2022

Led technology delivery for TinyMCE's digital experience team, supporting high-traffic developer-facing web properties and documentation experiences.

- Tech Lead for a team of 3 engineers across frontend, backend, infrastructure and digital experience systems.
- Led development of Tiny's landing and documentation websites, serving approximately one million monthly users.
- Supported products with significant developer adoption, including TinyMCE's npm ecosystem with millions of annual downloads.
- Integrated automated end-to-end testing and maintained CI/CD pipelines.
- Provided technical direction, code review and delivery coordination across cross-functional teams.
- Worked with React, Gatsby, CloudFormation, Ansible, PHP and Jest.

Software Developer

SITA, Brisbane

March 2018 – August 2020

Built scalable applications for information extraction, analysis and system integration in aviation technology environments.

- Designed and implemented software for information extraction and analysis.
 - Worked with system engineers to improve software and hardware interfaces.
 - Built applications using C#, C++, MSSQL, React, Node.js, AWS, WordPress, machine learning, Raspberry Pi and Vue.js.
 - Led project design and development in collaboration with multidisciplinary teams.
 - Delivered software against client requirements for functionality, timeline and performance.
-

Android Developer

WULI, Brisbane

January 2017 – December 2017

- Developed custom Android applications using Kotlin.
 - Managed mobile app lifecycle from planning through launch and support.
 - Led a team of 3 developers through app delivery and issue resolution.
-

Earlier Venture

Founder

Yabber AI, Brisbane

November 2023 – January 2024

Built a SaaS product for custom AI chatbots trained on customer data.

- Built AI chatbot workflows using Next.js, React, Node.js, PostgreSQL, AWS, Vercel, LangChain and OpenAI.
 - Integrated with platforms including Notion, Confluence and Figma to extract and process user data.
 - Designed the product using Tailwind UI.
 - Sold privately in 2024.
- .

Education

- **Bachelors in Computer Science**, Queensland University of Technology, Brisbane
- **Diploma of Information Technology**, Queensland University of Technology, Brisbane
